

# Business continuity management program

## Business continuity management review at GE Healthcare's manufacturing site in Uppsala, Sweden

We offer our customers the opportunity to review our business continuity management program at our manufacturing site for chromatography supplies in Uppsala, Sweden. The review includes presentation of our business continuity program from our manufacturing and risk management experts, including a site tour with opportunity to review and align risk management plans of your company and GE Healthcare. The review is commonly performed during one full working day. The agenda can follow a standard program or be customized according to each customer's request.

## GE Healthcare security of supply program in brief

Life Sciences is a division of GE Healthcare with more than 50 years of experience in the biotech industry. Starting with the development of Sephadex™ in 1959, we have continued to provide innovative solutions to enable manufacturing of next-generation biopharmaceuticals.

Today, our chromatography media (resins) are used in the majority of all manufacturing processes for FDA-approved biopharmaceuticals. Being a key solution provider for the biopharmaceutical manufacturing industry, we have implemented an extensive security of supply program for chromatography media to help secure business continuity for our customers, even under challenging conditions. This security of supply program includes one of the world's largest installed capacities of chromatography media. A business continuity plan following international standards has been implemented to minimize risk and impact of unforeseen incidents at the manufacturing site. As a complement to the business continuity plan, our strategic reserve of chromatography media used in approved and registered manufacturing processes of human therapeutics and vaccines enables deliveries of media during business recovery. In addition, we have implemented or identified at least one second supplier for most of our critical and important raw materials, to maintain a continuous production during an emergency. Going forward, we will implement second suppliers for all critical raw materials that exhibit the highest estimated financial impact.

To review our business continuity management program at our manufacturing site, please contact your local sales representative.
